

## Generating the JWT token:

## After adding the Authorization Key,

## Removing the Authorization Key,

The screenshot shows the Postman interface with a workspace named "My Workspace". The left sidebar displays a collection of API endpoints under "Equipment Allocation", including "getallocations", "getusers", "getproducts", "getequipmentbyproductid", "createallocation", "returnallocation", "addproducts", "addequipmentbyproductid", "getmaintenances", "postauth", "Event Management", "getevents", "gettasks", "getteams", "addteams", "addtasks", and "postevents". The main panel shows a GET request to "http://localhost:9000/allocation". The "Headers" tab is active, displaying an "Authorization" header with a Bearer token. The "Body" tab shows a "401 Unauthorized" response with the message "Please login! Invalid or missing token".

GET http://localhost:9000/allocation
